

SENTHION-50% ULV

INSECTICIDE
FOR LOCUSTS CONTROL
ULTRA LOW VOLUME

VAPCO

Class:
Organophosphate

Organophosphorus insecticide to control all stages of desert locusts (nymph and adults).

COMPOSITION: Each Liter contains:

FENITROTHION

50% W/V (A.I)

PROPERTIES:

SENTHION-50% ULV: Highly effective Organophosphorus insecticide, works by contact and stomach action.

SENTHION-50% ULV: With moderate mammalian toxicity.

SENTHION-50% ULV: With an ability to penetrate plant tissues.

SENTHION-50% ULV: Formulated as ULV so there is no need to be mixed with water, and application rates depends on the infestation.

SENTHION-50% ULV: Effective in controlling Desert locusts (nymph and adults) by creating barriers or complete coverage

USES AND APPLICATION RATE:

CROP	PEST	APPLICATION RATE	SAFETY PERIOD (DAYS)
All crops	Desert locusts (nymph and adults stages).	90 ml / donum (over all blanket and barrier treatment)	14

Donum = 1000 m²

CAUTION:

- Follow the recommended safety period before harvest.

NOTES:

- Do not eat the treated locusts.

- Do not graze the treated crops.

- Do not harvest the crop until the passage of safety period.

- Put warning sign indicating that the field is treated with pesticide to control locust.

PHYTOTOXICITY:

- Non-phytotoxic when used as recommended. Cotton, brassicas (cabbage, cauliflower, turnip and radish), and some fruits may be injured by high rates of application.

- Russting is possible with some apple varieties.

RE-ENTRY PERIOD:

48 hours from the last application.
