VERMECTIN 2%

(Injectable solution)

COMPOSITION: each ml contains:

Ivermectin 20 mg

PROPERTIES:

Ivermectin is derived from the avermectins, a family of potent broad spectrum antiparasitic agents which are isolated from fermentation of streptomyces avermitilis.

It is very potent nematocide and ectoparasiticide by oral and parenteral routes, but has no activity against flukes. Ivermectin has an acceptable safety margin, the dose required is very small and its activity persists for long after dosing.

INDICATIONS:

For the effective treatment and control of internal and external parasites of cattle, sheep, and camel (i.e gastrointestinal roundworms, lungworms, warbles, sucking and biting lice, cattle grubs and mange mites).

DOSAGE & ADMINISTRATION:

Should be given only by subcutaneous injection.

The dosage: 1ml / 100 kg of body weight.

WITHDRAWAL PERIOD:

Meat: Cattle, Sheep: 21 days

Camel: 28 days

Milk: 28 days

CAUTION:

Do not use in animal producing milk for human consumption, do not use in lactating ewes or within 21 days before lambing where milk is to be used for human consumption.

Camels producing milk for human consumption should not be treated.

STORAGE CONDITION:

Store in a dry and dark place below 30 °C.

FOR VET USE ONLY.
